Practice quiz questions.

1. Suppose we run the following code block. What will `is.data.frame(y)` return?

```
y <- tibble(x=1:2, y=1)`
```

2. Suppose `print(x)` returns the output below to answer a-c that follow.

```
# output
```

- a. What will `map_dbl(x, sum)` return?
  - b. What will `x$a` return?
  - c. What will `x[[5]]` return?
3. Suppose `x[[5]]` returns `NULL`, what will `is_tibble(x)` return?
  4. Can `readr` import a google sheet with the `read_csv()` function?
